Sep 6-10:08 AM

Properties of parallelograms

One special kind of polygons is called a parallelogram. It is a quadrilateral where both pairs of opposite sides are parallel.

- There are six important properties of parallelograms to know:
- Opposite sides are congruent ($AB = DC$, $(AD = DC)$)
 - Opposite angles are congruent ($D = B$, $(A = C)$)
 - Consecutive angles are supplementary. $A + B = 180^\circ$, $B + C = 180^\circ$, $C + D = 180^\circ$, $D + A = 180^\circ$
 - If one angle is right, then all angles are right. 90°
 - The diagonals of a parallelogram bisect each other.
 - Each diagonal of a parallelogram separates it into two congruent triangles. $\triangle BEC \cong \triangle DEA$, $\triangle AED \cong \triangle CED$

Objectives

Prove certain triangles are similar by using AA, SSS, and SAS.

Use triangle similarity to solve problems.

Postulate 7-3-1 Angle-Angle (AA) Similarity

POSTULATE	HYPOTHESIS	CONCLUSION
If two angles of one triangle are congruent to two angles of another triangle, then the triangles are similar.		$\triangle ABC \sim \triangle DEF$

Sep 12-7:56 AM

Theorem 7-3-2 Side-Side-Side (SSS) Similarity

THEOREM	HYPOTHESIS	CONCLUSION
If the three sides of one triangle are proportional to the three corresponding sides of another triangle, then the triangles are similar.		$\triangle ABC \sim \triangle DEF$

Theorem 7-3-3 Side-Angle-Side (SAS) Similarity

THEOREM	HYPOTHESIS	CONCLUSION
If two sides of one triangle are proportional to two sides of another triangle and their included angles are congruent, then the triangles are similar.		$\triangle ABC \sim \triangle DEF$

Sep 12-7:57 AM

Are the triangles similar by AA, SAS or SSS?

Side must be equal in proportions

Verify that the triangles are similar.

$\triangle PQR \sim \triangle STU$ same, yes

$$\begin{aligned} \frac{PQ}{ST} &= \frac{3}{4.5} = \frac{2}{3} = .67 \\ \frac{QR}{TU} &= \frac{3}{4.5} = \frac{2}{3} = .67 \\ \frac{PR}{SU} &= \frac{2}{3} = .67 \end{aligned}$$

Therefore $\triangle PQR \sim \triangle STU$ by SSS ~.

Example 1: Using the AA Similarity Postulate

Explain why the triangles are similar and write a similarity statement.

$\triangle ABC \sim \triangle DEC$

Verify that the triangles are similar.

$\triangle DEF \sim \triangle HJK$

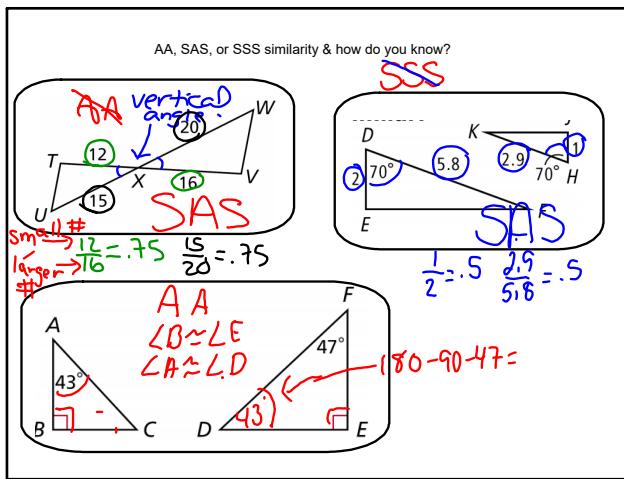

$\angle D \cong \angle H$ by the Definition of Congruent Angles.

$$\begin{aligned} \frac{DE}{HJ} &= \frac{2}{1} = 2 \\ \frac{EF}{JK} &= \frac{5.8}{2.9} = 2 \\ \frac{DF}{HK} &= \frac{2}{2.9} = 2 \end{aligned}$$

$70^\circ = 70^\circ$

Therefore $\triangle DEF \sim \triangle HJK$ by SAS ~.

11) In the diagram at right, a plane looks down at a mirror from an eye level. The eye is at $(0, 0)$ and the mirror is a vertical line from the eye to the ground. If the eye sees the front of the sign, then the eye sees the back of the sign. How far is the sign from the eye?
 $\frac{13.5}{6.2} = \frac{13.5}{6.2} = 2.2$
 $\frac{3.5}{3.5} = \frac{3.5}{3.5} = 1$
 $x = 18$
 $a^2 + b^2 = c^2$
 $18^2 + 12^2 = c^2$
 $434.25 = c^2$
 $20.8 = c$
