What is a chord? A line that touches the circumference of a circle two times.

Draw a circle with two intersecting chords. **CHORDS AD & BC**

What is a secant segment? A line that passes through the circle circumference 2 times.

Draw a circle with 2 secant segments which intersect outside the circle. **SECANTS: EF, GH**

What is a tangent segment? A line that touches a circle at only one point.

Draw a circle with a secant segment and a tangent segment which intersect outside the circle. **SECANT IS JK, TANGENT IS LM**

Geometry - Circles & chords, secants, tangents

Chord-Chord Product Theorem

If two chords intersect inside a circle, then the products of the lengths of the segments of the chords are equal.

$AE \cdot EB = CE \cdot ED$

Secant-Secant Product Theorem

If two secants intersect in the exterior of a circle, then the product of the lengths of one secant segment and its external segment equals the product of the lengths of the other secant segment and its external segment.

$AE \cdot BE = CE \cdot DE$

Secant-Tangent Product Theorem

If a secant and a tangent intersect in the exterior of a circle, then the product of the lengths of the secant segment and its external segment equals the length of the tangent segment squared.

$AC \cdot BC = DC^2$
